COVID-19
Separate to flatten the curve
Local cases increasing; still fewer in south NJ.

By DAVID NAHAN
Cape May Star and Wave

By Monday afternoon, the number of confirmed COVID-19 cases had climbed to 11 in Cape May County and to 30 in neighboring Atlantic County.

Of those infected in Cape May County had recovered, driving active cases to 14, according to the Cape May County Department of Health. Similar Sparta on recovery were not posted for Atlantic County.

While numbers were still relatively high in south Jersey compared to north Jersey, they had risen to 163 cases statewide, with 190 reported statewide by Monday afternoon.

Gov. Phil Murphy kept reinforcing his message that social distancing is the most important thing individuals can do to ensure there will be enough capacity in health facilities to handle the rising tide of cases.

Last Sunday night, March 29, the Cape May County Department of Health reported five new cases—the biggest single day in the past seven.

The department also said five individuals had recovered in the county, bringing the number of recoveries to 35, a 56-year-old female, a 65-year-old male, a 67-year-old female, a 67-year-old male, and a 66-year-old female.

The worst that’s happening is that these platforms are not even in use, there are no services, no music, no communion, no homilies, no sermons, no hymns, no anything.

That’s why we’re having to use these platforms to try to get some communion, to have the people feel united. We’re doing everything we can to keep the people connected, he said.
