Cape May Convention Hall built with upgraded air conditioners

Shaskan asked how much the city has spent on the air conditioning system in the past year. She said she believed at least $150,000 was spent on repairs to the system and she could supply a report. She said the system recently experienced glycol leaks, which can be hazardous.

“The only real solution is to replace with the correct units,” she said. The city’s air conditioning system and heating system are past their useful lifespan.

“We’re in the middle of the COVID crisis and we want to make sure that the city would not otherwise be at risk in this area,” she said.

“This challenge is one that we’ve dealt with since 2016 and $50,000 to replace the heating and air conditioning system. The system recently experienced glycol leaks, which can be hazardous. The city’s air conditioning system and heating system are past their useful lifespan. We want to make sure that the city would not otherwise be at risk in this area,” she said.
