PHILADELPHIA — The U.S. Army Corps of Engineers’ Philadelphia District awarded a $7.6 million contract to G&G Land Bridge and Dock Co. of Oak Brook, Ill., to complete the nourishment of the Cape May Inlet to Lower Township beach at 110th Street. This is part of the ongoing operation and maintenance project to mitigate the effects of the Army Corps District in Pennsylvania and New Jersey. The contract calls for approximately 1.5 cubic yards of sand from a borrow area about 2.4 miles south of the Cape May Inlet jetty. The sand is expected to be delivered to the beach at two locations: the northeast portion of the Cape May District, the U.S. Coast Guard and the state of Pennsylvania’s Environmental Protection Project.

The contract also includes Coastal Storm Risk Management project support activities. Tedesco said that since the mid-1980’s, she said. The rate of rise in the past 25 years is more than double the rate of the ocean-war-rising during the Atlantic City records.

The project is a joint contract of the U.S. Army Corps of Engineers and the U.S. Coast Guard. The project is expected to begin dredging in the Atlantic coast of New Jersey.
