Cape May committee considering extending Promenade

CAPE MAY — The city is likely to receive a grant from the Federal Emergency Management Agency (FEMA) of $700,000 to $800,000 for an initial design to extend the Promenade from Madison Avenue in Washington Avenue, according to Scott Maslow, chairman of Cape May’s Promenade and Seawall Advisory Committee.

The beachfront in that area is currently a mix of low dunes and rocks.

“Although we receive millions of dollars to protect our beaches and the dunes, we don’t have any money to extend the promenade,” Maslow said.

The committee is considering extending the Promenade from Atlantic Boulevard by more than 10 feet.

Maslow said he received an email from a member of the public who suggested a design for the Promenade.

Maslow said the city’s beachfront is located in a flood-prone area, which iswhy the city was able to set up dune management programs for Avalon and Stone Harbor.

Lomon explained the committee set up a public meeting on dune maintenance, according to Maslow.

The dunes have overcome a problem that blocks a view of the ocean from the Promenade and homes across Beach Avenue, Maslow said. He said some trees are taking over the dunes.

“Everybody is on board and ready to execute and maintain,” Maslow said.

In any maintenance permit being issued by the DEP, mapping of the current vegetation on dunes must be completed, he said.
