Same-day virtual primary care appointments.

Thanks to telehealth, when you need care, you can be exactly where you want to be when you’re sick. In bed, at home, working on feeling better.

Just make a same-day appointment with an AtlantiCare Virtualist to get face-to-face primary care using your phone, tablet or computer.

Visit www.atlanticare.org/virtualist or call 1-888-569-1000.

Available seven days a week.

Solution sought for flooding on Fourth in West Cape May

By JACK FICTHER

Cape May Star and Wave

WEST CAPE MAY — Pacific Avenue resident Courtney Grugenson asked commissioners if a flooding issue on Fourth Avenue could be addressed.

Grugenson spoke at the Borough Commissioners meeting, held Sept. 12 at borough hall.

“I spoke to multiple engineers it’s a constant that throughout the years that we have formally complained,” Grugenson said.

She asked what the borough could do to remedy the flooding zone.

“My understanding from calling the borough is there is some engineering that needs to potentially be done,” Grugenson said.

“I understand that this may need to be something that’s budgeted or considered over the years, but as a resident, I don’t think it’s acceptable for the level of flooding that’s happening on my property,” Deputy Mayor Peter Burke said.

The flooding on Fourth Avenue has been an ongoing issue for residents.

Deputy Mayor Peter Burke said the flooding has been present for many decades.

“Meadow Avenue at the street more rapidly than in the past,” Grugenson said.

Grugenson said the flooding problem could possibly be caused by enlarging storm water pipes.

Mayor Carol Sabo said a stormwater pipe was re- placed on Seeley Avenue three years ago. Grugenson asked if maybe the new pipes on Seeley Avenue would fix flooding on Fourth Avenue.

“We live in an area that is very flat, you’re probably lower actually, thank you for going to the problem, we have doubled the amount of water from the stormwater pipe at Sea Girt Road to the extent of rain, about the four to five inches,” Grugenson said.

She said the first order of business for the Public Works Department after a heavy rain is to clear out storm sewers. Sabo said that water generally disappears from the streets in 10 to 14 days after a heavy rain.

Grugenson said she cleaned out storm sewers in front of her house. She said her neighbors have cleaned the storm sewer in their block at 4 a.m. when necessary.

Burke said the storm sewer in the middle of the block on Fourth Avenue has been noted in the past. Sabo said the borough has various types of pipes throughout the borough.

“If you look at the pipes that we have, we have gravity sewer pipes in the middle of the block, we have stormwater pipes in the street,” Burke said.

Burke said the borough needs to potentially take another look at the pipes in the street.

Grugenson said she cleaned out storm sewers in front of her house. She said her neighbors have cleaned the storm sewer in their block at 4 a.m. when necessary.

“If you look at the pipes that we have, we have gravity sewer pipes in the middle of the block, we have stormwater pipes in the street,” Burke said.

Grugenson said the flooding on Fourth Avenue seems to be higher and the flooding on other streets in the borough.

“On Second Avenue at Sea Girt Road, we have the same engineers, the same contractors that did the work on Fourth Avenue,” Sabo said.

She asked what the borough would do if a flood occurred on Fourth Avenue.

Grugenson asked if there is a solution to the flooding on Fourth Avenue.

Burke said the borough has many more houses than 20 years ago, displacing sea level water in the past.

He said the state Department of Environmental Protection has permitted in the past.

Grugenson said the borough remediated some flooding issues on Second Avenue.

Borough engineer Anthony Chaddock, of Remington Vernick, said he served several coastal towns that had flooding on Fourth Avenue.

Burke said Fourth Avenue is a county-owned road.
