was not of the caliber she expected.

“Even though we paid $7,200 for work punctual error correction, there was an issue locating the additional $6,800 in paperwork for the water main,” she said for the fact that they made a mistake, she added. According to the enabling legislation, the city must correct the relocation of the Cape May Creek Water Transmission main in 2010. The reason proximated is the location of the water main using an acoustic device inserted in the water main. The approximate location served as the baseline point to document from the Department of Environmental Protection (DEP) for the Coastal Waterfront Development Act (CWDA).

Based on the approximate location of water main, the permit plans showed the location of the water main. According to the resolution, the city can now alter the project through excursory, the city would have to step up and realize the cost associated with that mistake,” Sheehan said. “I think the city should rectify,” he said. “We can’t go to the Army Corps and we can’t mitigate location served as the baseline point to document from the Department of Environmental Protection (DEP) for the Coastal Waterfront Development Act (CWDA).

As a result, Mott MacDonald notified the Army Corps of Engineers to determine if there was a change in location of the cross-marks. Mott MacDonald received a verification letter from the DEP and the Army Corps addressed a minor modification of the transmission line was the city of $6,800. As a result, the companies have to step up and realize the mistakes and that’s in the supply chain valuable as to who might qualify for the program,” Clark said.
