CAMBRIDGE, Mass. — Coastal towns should not be sitting on the sidelines when it comes to protecting the beach from the federal government, A. J. Siders, an Environmental Fellow at the Harvard Center for the Environment, said.

Siders research focuses on climate change adaptation governance, exploring how different types of public bodies adapt to climate change. Siders said the city of Cape May, New Jersey, is one of the few municipalities that have taken action to protect the beach from the effects of climate change.

Siders said the city has been able to receive permission from the DEP to remove sand and build dunes, to elevate homes or relocate homes, and buildings away from the shoreline. She said that Cape May is a good example of how municipalities can adapt to climate change.

Siders said reform is taking place on the federal level and that the federal government is also getting involved. She said that the Trump administration is seeking to reduce costs and that the federal government is looking at ways to reduce the amount of federal funding.

Siders said that municipalities should pay a higher percentage of the cost of beach replenishment. She said that cities should be able to pay for the beach replenishment process as well and that can be taken care of in the city budget.

Siders said that the city of Cape May has been able to receive beach replenishment in the past, but that the city has had to pay for it. She said that the city has been able to receive permission from the DEP to remove sand and build dunes, to elevate homes or relocate homes, and buildings away from the shoreline.
