A technician holds the drone during an engine test April 5. The flight was held to determine the size of the area for which Verizon Wireless could provide cellular service after a disaster.

"In the case of a disaster, we could have two or three of them going 24/7 to provide coverage for first responders and customers," said David Weissmann, Verizon Wireless.

"Long range wireless service could be provided from a drone. The drone itself could fly continuously for 16 to 23 hours.
